

Homework 19 - MATH 791

Will Thomas

Throughout this assignment R denotes a commutative ring.

Problem 1:

Let $I \subseteq R$ be an ideal, and $R[x]$ denote the polynomial ring in x over R . Let $I[x]$ denote the set of polynomials in R with coefficients in I and let $\langle I \rangle$ denote the ideal of $R[x]$ generated by the set I . Show that $I[x] = \langle I \rangle$.

Solution:

Admitted

Problem 2:

Maintaining the notation from 1, show that the rings $R[x]/I[x]$ and $(R/I)[x]$ are isomorphic.

Solution:

Admitted

Problem 3:

Let $R[[x]]$ denote the formal power series ring over R , i.e., the set of expressions of the form $\sum_{i=0}^{\infty} a_i x^i$, with $a_i \in R$. Note this is purely an algebraic expression and does not involve any notion of convergence. We add and multiply elements of $R[[x]]$ in the expected way: If $f = \sum_{i=0}^{\infty} a_i x^i$ and $g = \sum_{i=0}^{\infty} b_i x^i$, then: $f + g = \sum_{i=0}^{\infty} (a_i + b_i) x^i$ and $fg = \sum_{k=0}^{\infty} c_k x^k$, where $c_k = \sum_{i+j=k} a_i b_j$. For $I \subseteq R$, let $I[[x]]$ denote the elements in $R[[x]]$, all of whose coefficients belong to I .

- (i) Verify that $R[[x]]$ is a ring and $I[[x]]$ is an ideal of $R[[x]]$.
- (ii) Show that if I is finitely generated, then $\langle I \rangle = I[[x]]$ as ideals of $R[[x]]$.
- (iii) Can you give an example where $I[[x]] \neq \langle I \rangle$?

Solution:

Admitted

Here is Eisenstein's Criterion, which is an important test for irreducibility of polynomials over a UFD.

Eisenstein's Criterion: Let R be a UFD with quotient field K . Suppose $f(x) = a_n x^n + \cdots + a_0 \in R[x]$ is a primitive polynomial. Let $p \in R$ be a prime element and suppose: (i) $p \mid a_i$, for all $0 \leq i < n$. (ii) $p \nmid a_n$, and (iii) $p^2 \nmid a_0$. Then $f(x)$ is irreducible over K (equivalently, over R). For example, $x^6 + 10x^2 + 5x + 15$ is irreducible over \mathbb{Q} , by using Eisenstein's criterion and $p = 5$.

Problem 4:

Let $p \in \mathbb{Z}$ be prime and $f_p(x) = x^{p-1} + x^{p-2} + \cdots + x + x \in \mathbb{Z}[x]$. Use Eisenstein's criterion, together with the following fact to show that $f_p(x)$ is irreducible over $\mathbb{Q}[x]$: $f_p(x)$ is irreducible over \mathbb{Q} if and only if $f_p(x+1)$ is irreducible over \mathbb{Q} .

Solution:

Admitted

Problem 5:

Use Eisenstein's criterion and the fact that $\mathbb{Q}[x]$ is a UFD to show that $x^2 + y^2 - 9$ is irreducible in $\mathbb{Q}[x, y]$.

Solution:

Admitted.
